## The TI-Navigator™ system supports your classroom instruction and sparks the learning process.

The TI-Navigator system is a wireless network of graphing calculators connected to your classroom computer. Real-time, two-way communication with your students provides you the ability to assess individual progress and offer guidance when needed. Fully engage your class with interactive lessons geared toward developing critical problem solving skills. The TI-Navigator system emphasizes the comprehension levels of your students, so you know when they fully understand the material and are ready to advance.
