

Dr. Bruce Landman is Professor and Chair of the Department of Mathematics at the University of West Georgia. He is the author of *Ramsey Theory on the Integers*, a book written specifically to introduce students to the world of mathematical research and to allow them to begin solving unsolved problems themselves. It includes over well over one hundred unsolved problems which have a range of difficulty. He has published over thirty research articles, is co-editor of three books, and is the Managing Editor of the online research journal *Integers: Electronic Journal of Combinatorial Number Theory*. He has organized numerous conferences in combinatorics, graph theory, and number theory. He has served as research advisor to both undergraduate and graduate students. For more information visit <http://www.westga.edu/~landman>.

Dr. Abdollah Khodkar is an Associate Professor of Mathematics at the University of West Georgia. He completed his Ph.D. in Combinatorics in 1994 under the supervision of Dr. Elizabeth J. Billington at the University of Queensland, Australia. To date, he has over 90 publications in high-quality international journals. These research publications cover a broad variety of topics, using techniques that range from purely mathematical to totally computational. He has already served as research advisor to both undergraduate and graduate students. For more information visit <http://www.westga.edu/~akhodkar>.
