Title: What is new in MATHEMATICA 11

Abstract:

Since we just upgraded the campus site license to Mathematica 11, this seems like a great time for me to show what is new in Mathematica 11, what is new with our Wolfram Cloud project, and show the best way for new users to get started with Mathematica. This is a technical talk showing live examples in Mathematica, so faculty and students who have never used Mathematica will get a lot out of my talk. And existing Mathematica users will enjoy seeing what is new, and the newest ideas on how to teach others how to get started with Mathematica when teaching a course or collaborating on research projects.

All are welcome.
