3. Spirituality and Transpersonal Psychology

Transpersonal Psychology emerges from the study of those experiences and their correlates in which the sense of self in some way extends beyond individual identity. These are often described as spiritual events and inform consideration of human consciousness, development, and potential. Courses in this Concentration invite consideration of the nature of knowing, the life of mystics, developmental crises and opportunities, integration and distinction of psychology and spirituality or any number of related interests.

**Students interested in this Concentration area should be aware of and enroll in courses such as:**
