

#### **4. Psychologies of Mind and Body**

The emerging research in neuroscience joins the already extensive literature in mind-body medicine and philosophical-theoretical conceptions of the body both East and West to provide fertile ground for varied in-depth exploration of the bodymind. This is commonly grounded in and applied to the lived experience of embodiment ranging from the consideration of pleasure to healing to stress; the body may be taken up as text, shadow, a source of intelligence, lived meaning, a social construction, energy, and much more. This Concentration reflects such areas of emphasis.

***Students interested in this Concentration area should be aware of and enroll in courses such as:***

*PSYC 6000	Foundations of Humanistic Psychology
*PSYC 6021	Psychology as Human Science
PSYC 5040	Psychology of Dreams
