Prerequisites: MATH 1101 or MATH 1111

Courses Description: A noncalculus-based introduction to methods of descriptive statistics, probability, discrete and continuous distributions and other fundamental concepts of statistics.

Texts and Other Materials:

- Calculators: You are required to have a graphing calculator. I will be using a TI-83, but TI-85 and TI-86 are also acceptable. No cell phone allowed as a calculator during tests and final exam.

Topics: Methods for describing sets of data, including descriptive statistics and histograms. Simple linear regression. Probability of discrete and continuous random variables, including the binomial and normal random variables. Sampling distributions, including the Central Limit Theorem, Hypothesis testing and Confidence intervals.

Learning Outcomes: Upon successful completion of this course, the students will know how to properly collect data, how to describe and analyze that data, and make inferences about the population under study based on the sample data collected. The students will also be aware of and able to interpret the statistics with which we are bombarded on a daily basis in the print media, on radio, and on television, to help make informed decisions about their lives.

Testing /Make-up Policy
You must complete each test within the time allowed during the class period. Every test score will be used in computation of your progress test average.

If you have an excuse absence for one progress test, the next test score will replace the missing test. If you do not request an excuse absence for a missed test, or your request is denied you will received a zero on that test.
