Course Description: In this course, simple linear regression as well as multiple regression will be studied.
Attention will be given to methods of model building, diagnostics for examining the appropriateness of a
model, and remedial measures that may be helpful when the model is not appropriate. An understanding
of introductory statistical concepts is required.

Objectives: The objective of this class is to study and analyze regression models. In this study,
familiarity with hypothesis testing, confidence intervals, scatter plots, correlation coefficients, and the
coefficient of determination will be necessary, after completion of this course, the student will be able to
analyze and develop their own regression models.
