STUDENT MENTORING

Undergraduate Research:

R. Bennett

Mentored Ryan in archaeological laboratory analysis and curatorial methods, primarily. Ryan was already working at the Waring Lab when I started, so he had a strong working knowledge of curation prior to my mentorship, so my mentorship on this side was minimal. I worked very closely with him on laboratory analyses, though, training him on in-depth ceramic attribute analysis, which involved independent studies and additional time in the laboratory. Ryan is now currently pursuing an MA at Trent University.

E. Boatwright

SRAP Collaborative Art & Archaeology project; mentored Emily (Art Major) on her work with the collaborative SRAP project focused on developing stop motion animation outreach videos. Part of this mentorship involved teaching her about archaeology and its methods to help her better incorporate the imagery into the stop motion videos.

O. Burns

Mentored Oz on a provenance study of lithics from the UWG Campus Archaeological site. This project involved using pXRF to collect elemental data from debitage and shaped tools from the site and from raw material sources collected from around the state to conduct PCA to identify potential groupings between the artifacts and raw material sources. Additionally, we worked on developing least cost pathway models to understand potential land use patterns and strategies tied to lithic procurement.

J.D. Butler

Co-mentored John-David alongside David Mitchell (Psychology Program, DAPS) on an interdisciplinary project focused on exceptional experiences. My role is focused on the GIS side of the project and providing anthropological perspectives for analysis but have worked on training John-David in GIS analysis and archival research to increase his skillset.

J. Dees

SRAP Experimental Archaeology Program (Shark Tooth Tools) & Experimental Archaeology Program (Spiculate Tempered Pottery); mentored Jessica on an exhibit development project (Interpretive Anthropology Garden) and on the development of stop motion animation education outreach videos (Collaborative SRAP: Art & Archaeology). Worked with Jessica on developing conference paper presentations (co-authored two papers for 77th Annual Meeting of the Southeastern Archaeological Conference) and drafting manuscripts for publication. Jessica is now currently pursuing an MA at University of Alabama.

J. Edmondson

Mentored Joel through multiple projects, both field and laboratory. Joel came to UWG with an interest in archaeology and experience volunteering in a museum setting. Worked with Joel on further developing

the Interpretive Anthropology Garden exhibit, multiple curation projects, and on the excavation and analysis of an archaeological site on UWG campus. The latter involved developing a research project proposal for funding through the UWG Anthropology Program's Waring Research Scholarship Award. We also coauthored a poster on the Anthropology Garden Exhibit project for the 88th Annual Meeting of the Society for American Archaeology as well as multiple papers and posters on the research at the UWG campus archaeological site at the 79th Annual Meeting of the Southeastern Archaeological Conference.

M. El-Amin

Mentored Monica on her MA project for the Public History Program, which is focused on a multivocal community approach to exhibit development. This has involved collaborating with the Sapelo Geechee community to develop an exhibit based on their oral histories. We co-authored a conference poster on this project at the 77th Annual Meeting of the Southeastern Archaeological Conference. Monica is currently employed by the Atlanta History Center as a curator of collections.

J. Glaze

Mentored Jen on her MA project for the Public History Program, which is focused on developing a traveling exhibit for the Georgia Department of Natural Resources that will be used in public outreach events. Jen did not have a background in Southeastern Archaeology or Southeastern ethnohistory, so I worked very closely with her to provide and discuss different readings for the different archaeological periods of Georgia (the focus of the exhibit at GDNR's request). Jen is currently employed by the Atlanta History Center as a registrar.

R. Jackman

Mentored Ryan on an experimental archaeology project focused on shark tooth tools. This project involved recreating shark tooth tools and using them in a range of different tasks to document the use-wear developed from each task. Additionally, I worked with and trained Ryan on documenting the use-wear using a Scanning Electron Microscope. We co-authored a conference paper that he presented at the 79th Annual Southeastern Archaeological Conference.

G. Jorek

SRAP Experimental Archaeology Program (Spiculate Tempered Pottery); mentored Grace (Art Major), who is focused on ceramics, on the experimental archaeology project with a focus on the strength and toughness studies.

B. Maldonado

SRAP Collaborative Art & Archaeology project; mentored Brandon (Art Major, Anthropology Minor) on his work with the collaborative SRAP project focused on developing stop motion animation outreach videos, but I also worked closely with Brandon to develop his curatorial skillset since he wants to work in a museum.

J. Montuano

Co-mentored Jordan ("Alex") alongside David Mitchell (Psychology Program, DAPS) on an interdisciplinary project focused on exceptional experiences. Alex was focused on the archival side of the project, so my mentorship was focused on teaching him how to navigate the archives and how to develop and maintain the database we are using based on this archival work.

E. Moon

SRAP Education Outreach Program; mentored Emily in public archaeology through the SRAP grant-funded program, and on the Exceptional Experiences Database project focused on creating spatial data related to exceptional/anomalous/paranormal experiences in North America. Emily was focused more on the archival research side of this project, so my mentorship focused on archival research methods, but I also taught her the basics of creating a spatially-focused database.

B. Oliveira

SRAP Education Outreach Program; mentored Bailey in public archaeology through the SRAP grant-funded program since her career path was focused on public outreach and education. I worked closely with her to develop outreach programming and activities and advised her on selected pedagogical literature to aid in this. We ended up co-authoring a poster at the 76th Annual Meeting of the Southeastern Archaeological Conference that was focused on the pedagogical benefits of VR programming in outreach. Bailey is currently a K-12 social studies educator.

E. Petras

SRAP Collaborative Art & Archaeology project; mentored Emma (Art Major) on her work with the collaborative SRAP project focused on developing stop motion animation outreach videos. Much of this involved teaching her about archaeology, its methods, and the pedagogical resources involved in teaching archaeology to children of different ages.

M. Preiser

Mentored MaCayla as an archaeology convert and have worked with her on both curation and exhibit development. This has involved training her in curatorial methods at the Waring Lab as well as direct training in lithic analysis and exhibit design. Her research has been focused on developing an interpretive trail with signage for the on-campus archaeological site she helped excavate during field school.

R. Pritchard

Mentored Raleigh on a project focused on Public Archaeology's methodologies and pedagogical strategies. This mentorship has largely been focused on reading and discussing the different pedagogical strategies and approaches useful in educating the broader public on archaeology and its various facets. We are currently (Fall 2024) in the process of focusing Raleigh's research and work on a data-driven Public Archaeology project in partnership with faculty in the College of Education.

S. Setter

Mentored Sierra as an archaeology convert and have helped prepare her for a career in cultural resources management. Much of this involved having weekly meetings and readings to get her caught up on the archaeology side, but it also included training her on curatorial methods at the Waring Lab, focused methodological work during field school, helping develop her networks at conferences, and setting up interviews with CRM professionals. Provided faculty advising and mentoring on Sierra's honors thesis research focused on thermal shock resistance in pottery, specifically looking at quantifying gradual effects of thermal shock. Sierra is currently a collections manager at the Graveface Museum.

K. Smith

SRAP Collaborative Art & Archaeology project; mentored Kristin (Art Major) on her work with the collaborative SRAP project focused on developing stop motion animation outreach videos. As an Art Major, Kristin did not have any background in Anthropology or Archaeology, so much of this mentorship involved teaching her the basics of the discipline while also discussing the different ways of incorporating that discipline into her project medium. Additionally, there was a strong focus on reading and discussing different pedagogical strategies to help bring the project to life in an educational way.

M. Ware

SRAP Education Outreach Program, SRAP Experimental Archaeology Program (Spiculate Tempered Pottery) & Experimental Archaeology Program (Shark Tooth Tools); helped her develop paper presentations (virtual) for Clark Atlanta University's Undergraduate Research Symposium and the National Center for Undergraduate Research Conference; Megan was also a co-author on a professional conference paper for the 73rd Annual Florida Anthropological Society Meeting and the 77th Annual Meeting of the Southeastern Archaeological Conference; provided faculty advising and mentoring on

Megan's honors thesis research that focused on developing an experimental approach to test the effects of fertilizers on artifact surfaces. Megan is currently employed as a field technician at PaleoWest Archaeology.
